

## Chapter 2:

# *The types of stomas observed in paediatrics*

As healthcare professionals, it is important that we are informed about the types of stomas that are observed in children, babies and neonates. The following chart provides examples and descriptions of the types of stomas observed in the paediatric population.

For more information, see the glossary.

## Types of stomas

## Faecal diversions

End ileostomy/colostomy

Loop ileostomy/colostomy

End stoma with mucous fistula  
(either side by side or placed  
further apart)

## Urinary diversions

Vesicostomies
